

Why is it so hard ...

to balance  
the Management of the Present  
+

Simultaneously create the Future?

It's all about our Corporate  
Comfort Zone!

think ambidexterity

# Our Corporate Comfort Zone ...

Status Quo

“Performance Engine”

Future

- uncertain
- risky
- distant
- abstract

The Comfort Zone!

- well understood
- proven
- activity based

=> Dominant Logic

# Why is it so hard ?

## Manage Performance

### Inputs

Unambiguous, objective data regarding:

- Current customers
- Current competitors
- Known technologies

### Strategic Emphasis

Innovation contribution to:

- making the numbers
- enhancing current competencies
- reducing risk
- eliminating ambiguity + derivation
- variance reduction
- efficiency

## Create Opportunities

### Inputs

Weak signals regarding changes affecting:

- Noncustomers
- Nontraditional competitors
- New + emerging technologies

### Strategic Emphasis

Innovation contribution to:

- testing assumptions
- building new competencies
- embracing risk taking
- experimentation. learning, adaption
- variance expansion
- flexibility

The Challenge:

the way we measure logic + performance !

# Why is it so hard ?

Manage  
Performance

Selectively  
**Forgetting the  
Dominant Logic!**

Create  
Opportunities  
within the  
Strategic Intent

The Forgetting Challenge :  
selecting carefully what to take across!

# What if...

- We could respond twice as fast to customer needs?
- We could recognize changes in the market as very weak signals and plan for change?
- We could create services and products which meet the real needs better than even the customers expect?
- We could stand apart from competition by having work processes as our core strategic competence?
- We could create project visions which all project members would truly fight for?

How does Business Transformation  
succeed on all levels?

# Succeed in Business Transformation

## 1. **Weak Signals** of „Non-Linear Shifts“ that could transform your industry

Customer discontinuities, technology discontinuities, non-traditional competitors, regulatory changes

## 2. Be clear about the **Strategic Intent** (it's not a Mission Statement! It's an unrealistic goal!)

„We will put a man on the moon and bring him back before the end of the decade.“ JFK

„Put a PC on every desk and in every home“ MS

## 3. Gain **Customer Insight** to create significant customer value

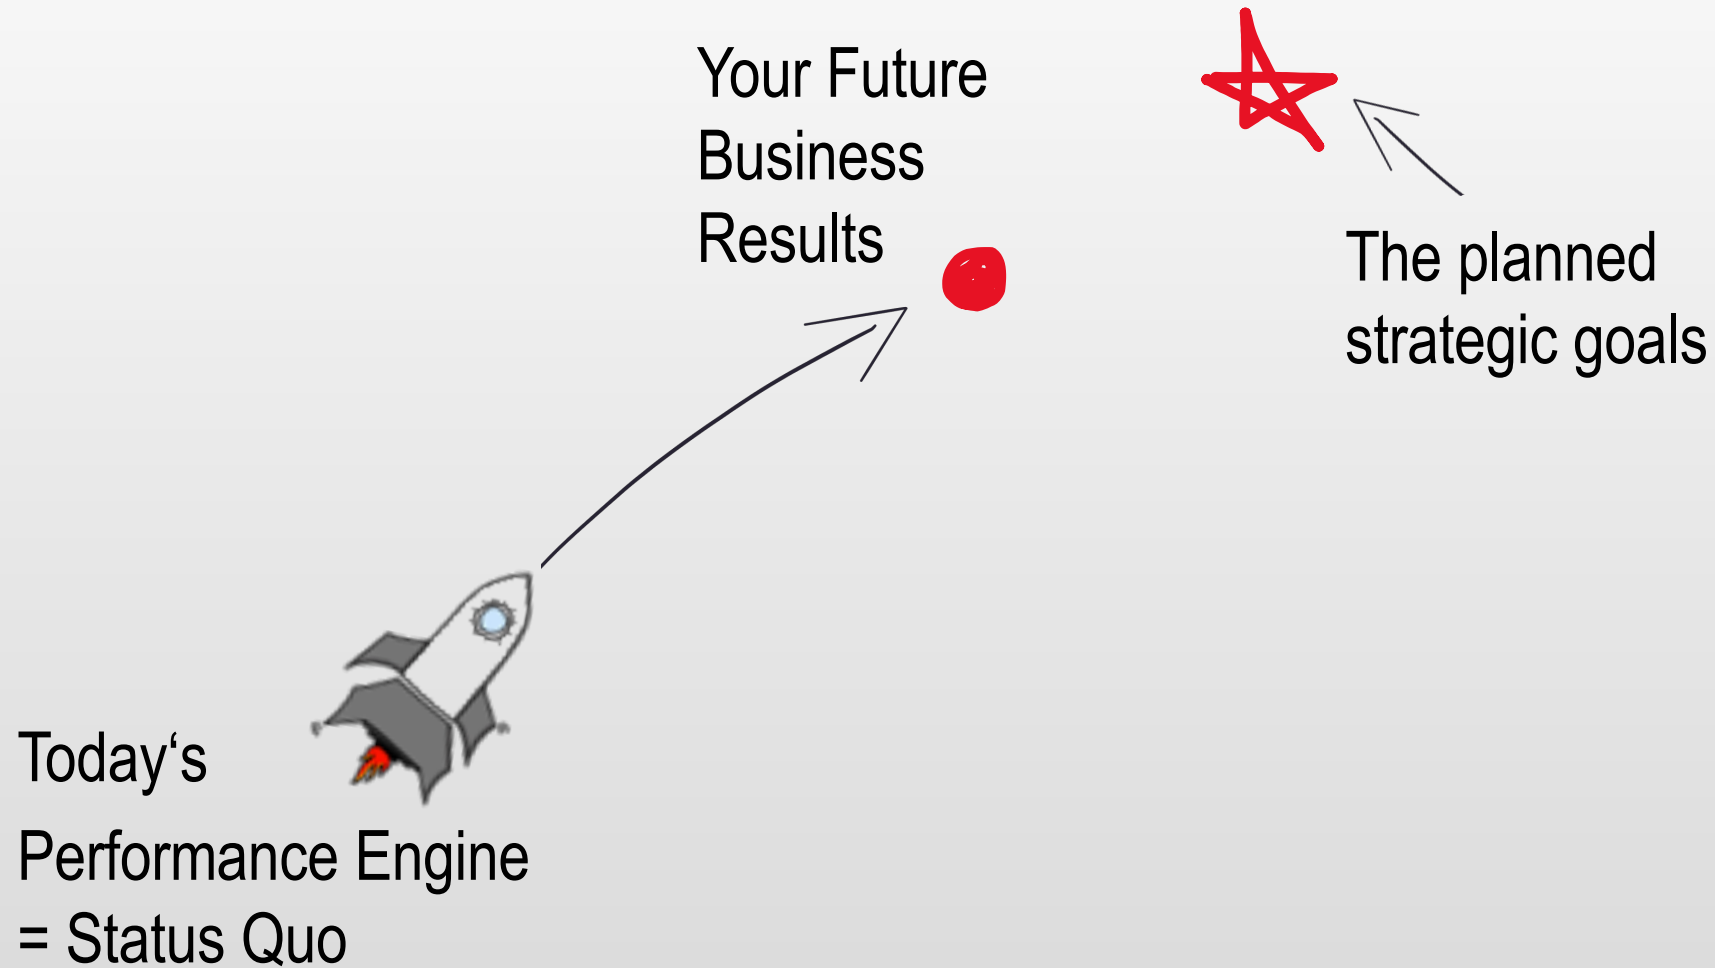

use methods of customer discovery, Value Prop Canvas, ...

## 4. Selectively forget the “**Dominant Logic**”

use methods of "unfixedness" like Design Thinking, Problem Decomposition, Reverse Innovation, Systematic Inventive Thinking, SCAMPER, ...

Think big, dream big, but start small!, scale fast +  
Focus at 500m at a time, when running a marathon...

# Your Company Strategy

# When Innovation is Part of Strategy

Your companies' strategic goal can only be reached, with 'always-on' innovation

**All innovation activity directly contributes to delivering the strategy**
